

# **DOCKER NETWORK PRCATICAL CONNECTING TWO CONTAINERS WITH PING COMMAND**

---

## **HISTORY INSIDE CONTAINER**

**3**

**4 apt install iputils-ping**

**5 apt update**

**6 apt install iputils-ping – TO  
INSTALL PING COMMAND INSIDE  
CONTAINER**

**7 ping 172.17.0.2—PINGING TO NO.  
1 CONTAINER FROM CONTAINER NO 2**

---

**TO CRETAE A CONTAINER IN ROOT  
WITH BRIDGE NETWORK**

**pwd**

**2 apt update && apt install  
docker.io**

**3 systemctl start docker**

**4 systemctl status docker**

**5 docker pull ubuntu—to pull image  
from library**

**6 ls**

- 7 systemctl start docker.service**
  - 8 apt update**
  - 9 apt install docker -y**
  - 10 apt install docker.io -y**
  - 11 systemctl start docker**
  - 12 systemctl status docker**
  - 13 docker pull ubuntu**
  - 14 docker network ls**
  - 15 docker images**
  - 18 docker run -d -ti --name con1 -p 80:80 --network bridge ubuntu**
- (here 80:80 is port no. of http and other 80 is a target group)**
- 19 docker ps**
  - 20 docker inspect con1**

**21 docker run -d -ti --name con2 -p  
--network bridge ubuntu**

**22 docker run -d -ti --name con2 --  
network bridge ubuntu**

**23 docker ls**

**24 docker ls -a**

**25 docker -p**

**26 docker -ps**

**27 docker ps**

**28 docker exec -ti con2 bash**

**29 history**

---

**TO PING FROM CONTAINER TO LOCAL  
HOST**

## THIS COMMAND RUNS INSIDE A CONTAINER

```
apt install iputils-ping
```

```
9 ping localhost --- TO PING LOCAL HOST/OUR  
LAPTOP
```

```
10 exit
```

---

### To create a container with none network

```
docker run -ti -d --name mycon3 --network  
none ubuntu
```

similarly we can create other containers  
with other networks

---
